AG Consultraining

Service Master

- ▶ The Service Master is part of the master data within External Services Management. External Services Management (MM SRV) is an application component within the Materials Management (MM) module. It supports the complete cycle of procurement, acceptance and invoice verification of externally performed services.

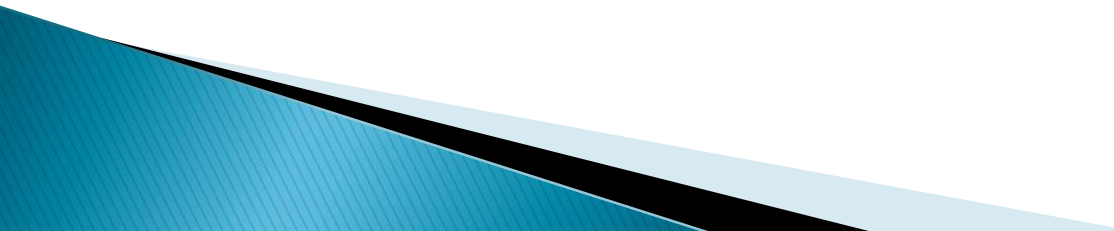

Integration

Service Master Record

- ▶ The Service Master Record contains the description of a service
- ▶ The service description is entered only once and can be drawn upon when creating requirements, reducing the frequency of errors and saving time.

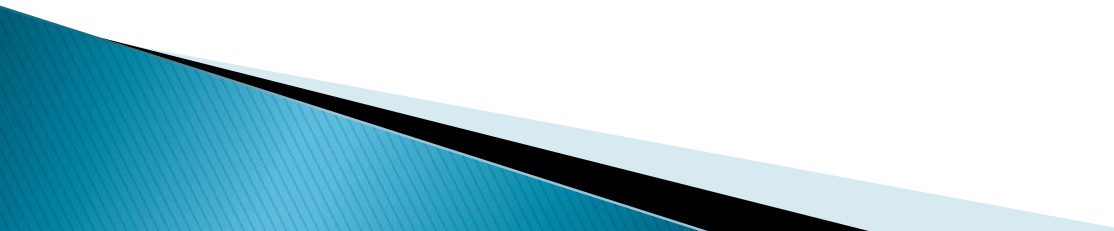

Service Master Record

- ▶ A service master record contains the following information for the unique description of a service:
 - ▶ Service number
 - ▶ Service category
 - ▶ Descriptive texts (short and long text)
 - ▶ Base unit of measurement
 - ▶ Material/service group
 - ▶ Valuation class
-
